The article "Upskill, Reskill or Retire: Responding to the Advent of AI" examines the growing trend of job displacement due to advancements in artificial intelligence (AI). With major companies like IBM and Cisco announcing significant layoffs as they pivot towards AI integration, the impact on the workforce is becoming increasingly evident. The article emphasizes the need for individuals to adapt through upskilling or reskilling to remain relevant in the job market.

### **\*\*Benefits\*\***

AI is not only displacing jobs but also creating new opportunities. Industry leaders predict that AI will generate millions of new roles, highlighting the importance of adaptability and continuous learning. By investing in digital infrastructure and workforce training, both advanced and developing economies can harness AI's potential to enhance productivity and economic growth. Collaborations, such as the partnership between NVIDIA and California's educational institutions, are crucial for building a digitally competent workforce and supporting the semiconductor industry.

### **\*\*Conclusion\*\***

As AI continues to transform the global job landscape, individuals must evaluate their career paths through a lens of potential impact and opportunity. Upskilling and reskilling become essential strategies to navigate this shift, while retirement or semi-retirement may be viable options for some. The article underscores the urgency of preparing for AI's continued integration into the workforce, encouraging proactive steps to shape a future where AI benefits humanity.
